

The LDM Range

The LDM emergency control gear has been designed to be used with most LED Driver powered luminaires so that the luminaire can operate normally with mains power and provide the optimum battery powered light output in the event of a mains failure. With Lithium Iron Phosphate (LiFePO₄) batteries now fitted as standard its small design is well suited for luminaires as they become more compact. The LDM can be provided as a kit and has been designed to be installed inside a luminaire with the other control gear. Alternatively there is a kit option for the LDM to be used remotely from the luminaire when there is not enough space internally.

The LDM emergency LED control gear allows maintained operation of high-power LED modules, when used in conjunction with the standard mains voltage LED driver making it ideal for luminaires that need emergency conversions. The emergency control gear incorporates a module/charger and a high temperature LiFePO₄ battery. In the event of a mains failure an integral 2-pole relay disconnects the LED lighting load from the mains LED driver and then connects it to the emergency control gear which operates the LED module at an optimum light output for the rated duration.

Microprocessor enabled features

- The LED current in emergency mode is automatically adjusted for maximum light output and is constant for the entire rated duration.
- Smart charging of LiFePO₄ batteries. NB: LiFePO₄ batteries offer long life (up to 8 years)
- Details are logged of any mains failures to assist in the diagnostics of any site issues.
- The LDM range is available with fully interoperable DALI control and reporting function. These DALI versions indicated by the suffix D, also provide automatic Self Test when no DALI bus is connected.
- The LDM can be programmed for 1hr and 3hr duration times.

LDM emergency control gear

To ensure the correct operation of each type of LED modules the correct LDM equipment should be selected. The total forward operating voltages of the LED module / arrays connected should be used to determine the appropriate LDM control gear.

For the appropriate battery, indicator LED etc. See the order codes on the last page.

Total Forward Operating Voltages

12 - 90V LDM90LI, LDM90LID, LDM90MO, LDM90MOD, LDM90HO, LDM90HOD

60 - 200V LDM200LI, LDM200LID, LDM200MO, LDM200MOD, LDM200HO, LDM200HOD

Note: High output (HO) control gear provides approximately twice the output of the standard control gear
